

Muhammad Qasim Akram

Full Stack Web Developer | React, Node.js, Django

Bahawalpur, Pakistan | +92 312 6442266 | qasimakram46@hotmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Full stack web developer and BS Computer Science student (graduating 2027) who builds and deploys React, Node.js and Django applications. Projects include a real-time chat app built on WebSockets, an e-commerce store with a CI/CD pipeline, and an AI developer assistant, all live on Azure, Vercel or Railway. Comfortable across the stack, from REST API design and authentication to deployment, with hands-on machine learning and LLM work.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), React.js, Vite, React Router, Context API, CSS Modules

Backend: Node.js, Express.js, Django, Django REST Framework, REST APIs, WebSockets, JWT authentication

Databases: PostgreSQL, MongoDB, MySQL, SQLite, Redis

AI & Machine Learning: Machine Learning, Prompt Engineering, LLM APIs (Groq), Computer Vision (YOLOv8, OpenCV)

Tools & Deployment: Git, GitHub Actions (CI/CD), Azure App Service, Vercel, Railway, Netlify

Other: Python, NumPy, Pandas, C++

PROJECTS

ChatRoom: Real-Time Chat App | [Live](#) | [GitHub](#)

2026

Django 4.2, Django REST Framework, Django Channels, PostgreSQL, Redis, SimpleJWT, React.js, Vercel, Railway

- Wrote custom Channels middleware that checks SimpleJWT tokens passed in the query string before a WebSocket connection is accepted, since Django has no built-in way to do this.
- Used Redis pub/sub to broadcast messages, emoji reactions and notifications to all connected users in real time. Backend, PostgreSQL and Redis are deployed together on Railway.
- Built a 14-endpoint REST API with DRF for rooms, messages, reactions and notifications, and tested the auth flows and WebSocket edge cases before release.

yourOwn: Full Stack E-Commerce Store | [Live](#) | [GitHub](#)

2026

React 19, Node.js, Express.js, Sequelize ORM, SQLite, JWT, bcryptjs, Azure App Service, GitHub Actions

- Set up a GitHub Actions pipeline so every push to main builds, tests and deploys to Azure App Service in under 2 minutes with no manual steps. Debugged the Azure environment variable issues along the way.
- Built a 14-endpoint REST API across four modules (products, cart, orders, payment) with JWT auth, bcryptjs password hashing, 7-day token expiry and protected routes.

DevChat: AI Developer Assistant | [Live](#) | [GitHub](#)

2026

React 19, Node.js, Express.js, MongoDB Atlas, JWT, bcrypt, Groq LLaMA 3.3-70B, Vercel, Railway

- Moved all Groq LLaMA 3.3-70B API calls to the Express backend so the API key never reaches the browser, and added Debug, Explain and Optimize quick-action buttons to save repeated typing.
- Managed state with Context API and useReducer, wrote three custom hooks (useAutoScroll, useFormInput, useLocalStorage), and added error boundaries and JWT/bcrypt auth with protected routes across a three-service cloud setup.

Portfolio Website | [Live](#)

2026

HTML5, CSS3, JavaScript, Netlify

- Built a single-page portfolio in plain HTML, CSS and JavaScript with scroll-reveal and tilt animations, a custom cursor and a scroll-locked flip card, deployed on Netlify.

EDUCATION

Islamia University of Bahawalpur | BS Computer Science (6th of 8 semesters)

Sep 2023 – Sep 2027

Relevant coursework: Web Engineering, Data Structures and Algorithms, Database Management Systems, Object-Oriented Programming, Theory of Automata, Parallel Computing, Compiler Construction, Computer Vision

CERTIFICATIONS

Advanced MySQL Topics | Meta | [Verify](#)

Sep 2025

Supervised Machine Learning: Regression & Classification | Stanford / DeepLearning.AI | [Verify](#)

Dec 2025

Python for Data Science, AI & Development | IBM | [Verify](#)

Oct 2025
